Mineral Tenure Application 1127124

88.23 Ha

An early-stage, greenfield mineral tenure located near Iskut, British Columbia, within the Golden Triangle of northwestern British Columbia. The Property lies in the Stikine Terrane of the Intermontane Belt, an area underlain by Paleozoic volcanic rocks of the Stikine Assemblage, including undivided volcanic units interpreted as tuffs and minor flows.

The Property is located in the Forrest Kerr area, a highly active part of the Golden Triangle that hosts multiple large-scale gold and copper systems. The broader district contains several multi-million-ounce gold deposits and major copper-gold projects and continues to attract sustained exploration and development activity supported by improved access and infrastructure.

Summary information/highlights

- Early-stage greenfield tenure in the Forrest Kerr area of BC's Golden Triangle
- Located within the Stikine Terrane, a geological setting that hosts numerous large gold and copper deposits in the surrounding district
- Adjacent to an area with active exploration and development, including projects that have defined multi-million-ounce gold resources
- No historical drilling or surface sampling completed on tenure.

This property is offered for sale by way of cash or working option to purchase.

Preference given to companies willing to fund further exploration.
